CURRENT CHALLENGES

Unpredictable Waiting

Students face uncertain waiting times outside interview rooms with no visibility into queue progress

Manual Chaos

Coordinators rely on scattered spreadsheets and verbal updates, creating inefficiencies and errors

No Real-Time Tracking

Students must repeatedly ask coordinators for status updates instead of receiving live notifications

REQUIREMENTS

- Students can view and manage their shortlisted companies
- Students can join interview queues and track live position updates independently
- Coordinators can view all queued students and update their status with a single click

OUR FINAL PRODUCT

Clarity over chaos: The definitive live platform for a seamless, stress-free placement drive managing every interview, queue, and decision with total transparency.

Zero friction. Zero confusion. Zero missed opportunities.

POTENTIAL USERS

- STUDENTS
- COMPANY COORDINATORS
- PLACEMENT COORDINATORS

KEY FEATURES

Real-Time Queue Tracking

Students can view their exact position in the interview queue and receive estimated wait times without repeatedly asking coordinators

Bulk Data Upload

Administrators can quickly import student shortlists and company details using simple Excel file uploads

Secure Dashboards

Dedicated, role-based interfaces for students, coordinators, and administrators with appropriate access controls

Live Notifications

Instant alerts notify students when it's their turn, eliminating uncertainty and reducing stress

IMPLEMENTATION

Frontend Layer

Built using React for dynamic user interfaces with Tailwind CSS for responsive, modern styling

M E R N

Backend Layer

Node.js and Express.js handle all server requests and business logic

Data Storage

MongoDB manages secure storage of student profiles, company details, queues, and notifications

Excel Uploads

xlsx and multer pacakges were used for implementing the excel upload feature.

DEMONSTRATION !

FUTURE IMPLEMENTATIONS

- Mobile App & Notifications:

  Build a mobile application that provides an intuitive interface for managing queues, tracking progress in real time, and receiving timely updates.

- Recruiter/Company Portal:

  Implement a dedicated recruiter interface that streamlines shortlisting, provides easy access to candidate profiles, and facilitates seamless candidate management.

- Verified Profiles:

  Integrate automated resume validation to ensure data integrity, complemented by a centralized hub for students to track application status.

- Assessment System

  Integrate an assessment platform to evaluate candidates for internships and placements through tests, assignments, and performance tracking.

- Integrated Communication System:

  Enable real-time chat between APC/COCO and students for queries, updates, and guidance throughout the placement process.

LESSONS LEARNT

Team Collaboration

Improved teamwork and coordination.

Task Allocation

Effective responsibility distribution.

Planning & Discipline

Structured approach and timely execution.

Development Process

Exposure to real-world workflows.

LLM Limitations

Need for fundamentals and debugging.

QUESTIONS?

We sincerely thank Professor Indranil Saha and our TA Seetaramayya Lavu for their support throughout The Course CS253 and the project.

Shoutout to team 3 for pointing out a few bugs

THANK YOU!
